Safety Information

For your own safety and the safety of others, and to prevent damage to the device and vehicles upon which it is used, it is important that the safety instructions presented throughout the product user manual be read and understood by all persons operating or coming into contact with the device.

There are various procedures, techniques, tools, and parts for servicing vehicles, as well as in the skill of the person doing the work. Because of the vast number of test applications and variations in the products that can be tested with this equipment, we cannot possibly anticipate or provide advice or safety messages to cover every circumstance. It is the automotive technician's responsibility to be knowledgeable of the system being tested. It is crucial to use proper service methods and test procedures. It is endanger your safety, the safety of others in the work area, the device being used, or the vehicle being tested.

Before using the device, always refer to and follow the safety messages and applicable test procedures provided by the manufacturer of the vehicle or equipment being tested. Use the device only as described in this manual. Read, understand, and follow all safety messages and instructions in this manual.

Safety Messages

Safety messages are provided to help prevent personal injury and equipment damage. All safety messages are introduced by a signal word indicating the hazard level.

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury to the operator or to bystanders.

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury to the operator or to bystanders.

Safety Instructions

The safety messages herein cover situations Auro is aware of. Auro cannot know, evaluate or advise you as to all of the possible hazards. You must be certain that any condition or service procedure encountered does not jeopardize your personal safety.

When an engine is operating, keep the service area WELL VENTILATED or attach a building exhaust removal system to the engine exhaust system. Engines produce carbon moloxide, an odorless, poisonous gas that causes slower reaction time and can lead to serious personal injury or loss of life.

SAFETY WARNINGS

- Always perform automotive testing in a safe environment.
- Wear safety eye protection that meets ANSI standards.
- Keep clothing, hair, hands, tools, test equipment, etc. away from all moving or hot engine parts.
- Operate the vehicle in a well ventilated work area, for exhaust gases are poisonous.
- Put the transmission in PARK (for automatic transmission) or NEUTRAL (for manual transmission) and make sure the parking brake is engaged.
- Put blocks in front of the drive wheels and never leave the vehicle unattended while testing.
- Be extra cautious when working around the ignition coil, distributor cap, ignition wires and spark plugs. These components create hazardous voltages when the engine is running.
- Keep a fire extinguisher suitable for gasoline, chemical, and electrical fires nearby.
- Do not connect or disconnect any test equipment while the ignition is on or the engine is running.
- Keep the test equipment dry, clean, free from oil, water or grease. Use a mild detergent on a clean cloth to clean the outside of the equipment as necessary.
- Do not drive the vehicle and operate the test equipment at the same time. Any distraction may cause an accident.
- Refer to the service manual for the vehicle being serviced and adhere to all diagnostic procedures and precautions. Failure to do so may result in personal injury or damage to the test equipment.
- To avoid damaging the test equipment or generating false data, make sure the vehicle battery is fully charged and the connection to the vehicle DLC is clean and secure.
- Do not place the test equipment on the distributor of the vehicle. Strong electromagnetic interference can damage the equipment.

DISASSEMBLE INSTALL THE EEPROM CHIP	

Introduction

This manual introduces how to conduct BMW key learning with Auro OtoSys IM100 Smart Mode and Expert Mode.

Two options are available when accessing the IMMO function:

- Smart Mode the IM100 tablet will read the vehicle information and analyze the IMMO part information automatically.
- Expert Mode user can make selections step by step to locate the IMMO part.

> Procedures before getting started:

- 1. Connect the IM100 tablet to the programmer UP200 via included mini USB cable.
- 2. Dismount the ECU module from the vehicle, refer to appendix on page 30.
- 3. Connect the ECU module to the Emergency coil stretched out from COM7.
- Connect one end of the included OBD cable to the IM100 tablet, while the other end needs to be connected to the wire harness stretched out from COM8 on the ECU module. The wire harness is not included, you could DIY, details in Appendix on *page 31*.
- 5. Make sure the WiFi service is available in case the operation data needs to be sent.

NOTE

Illustrations used in this manual are samples, and the actual testing screens may vary by vehicle. Observe the menu titles and on-screen instructions to make correct selections and operations.

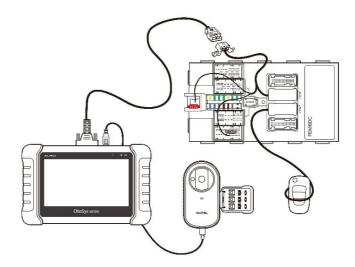

Figure 1 Sample Overall Structure

Key Learning via Smart Mode

1. Turn on the IM100 tablet, tap **OtoSys** on the main interface screen, then **IMMO**. A vehicle menu displays and a disclaimer prompts up. Tap **Accept** to continue.

Figure 2 Sample Main Interface

Figure 3 Sample OtoSys Screen

2. Tap **BMW** on the vehicle menu, tap **Smart Mode** on the Mode Select interface. The Vehicle Information interface displays.

⊘NOTE

You can click on the icon near the top-right corner to record the operation data. If you encounter any difficulties, click on the icon again to send us the data and problems, so that our engineers could help.

Appendix

Disassemble the ECU Module

The FEM/BDC module is located at the A-pillar of the front passenger side.

> Procedures to disassemble the ECU module from the vehicle:

- 1. Unclip the front door sill cover strip at the passenger side.
- 2. Remove the bottom right instrument trim panel and disconnect plug connections behind it.
- 3. Remove the side trim panel at the passenger side.
- 4. Remove the cover at the lower part of the module.
- 5. Unlock the positive battery cable connector.
- 6. Disconnect the plug connections to the module.
- 7. Release the bolt from the module.
- 8. Remove the module from the vehicle.

Connect the Test Wire Harness and OBD Cable

Details to connect the test wire harness and OBD cable are shown below. Make sure wires are connected to the right pins.

- > Procedures to connect the test wire harness and OBD cable:
 - 1. Connect cables to corresponding pins according to the number shown in the figure.
 - 2. Connect another side of the wire harness of these cables to the OBD female adapter.
 - 3. Connect the emergency coil to the corresponding pins according to the numbers.

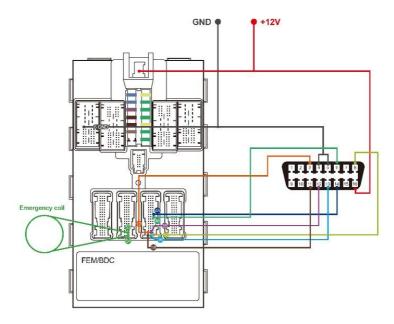

Figure 60 Sample Overall Connection

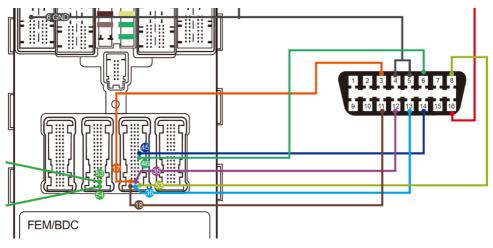

Figure 61 Sample Corresponding Numbers

NORMAN KEYS

Disassemble the EEPROM Chip

- > Procedures to disassemble the EEPROM chip are shown below:
 - 1. Find the chip in the ECU module.
 - 2. Disassemble the EEPROM chip and figure out the pin 1, the bevel side on the right, viewed from the cross section.
 - 3. Assemble the chip in the clamp, match the pin 1 of the chip with that on the clamp.

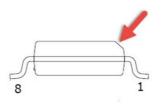

Picture 1: EEPROM position on FEM System
